MediaStation

Efficient processing of data
from digital devices and media.

MediaStation Highlights

The MediaStation is the complete back office solution for transferring video, images and audio from digital devices and media. Plug in your device, touch the appropriate app and leave MediaStation to quickly process your data effortlessly following your defined procedure.

No traditional computers are required, thereby removing the additional costs and problems associated with running multiple applications to process data in the back office. The MediaStation can operate as a standalone machine or be integrated with other systems via the network.

Apps - for specific tasks

MediaStation comes preloaded with a default set of applications to carry out common tasks. Additional apps can be built to your requirements.

Multitasking

Multiple tasks are combined and carried out simultaneously ensuring that processes are completed in the optimum time possible.

WORM media support

Write data to WORM media (write once read many) this is the ideal media for evidence and archive storage as once written the data cannot be changed and is secure for up to 50 years. MediaStation supports CD, DVD and Blu Ray media.

MD5 / SHA-1 check sums

Digital finger prints can be created at the time of capture and these can be logged as part of an audit trail and stored alongside the data.

Transfer data fast and reliably

The optimised environment along with professional hardware allows the data to be transferred fast and reliably time after time.

Secure erase and testing

Wipe flash media securely while testing at the same time ensuring no cross contamination or disclosure of sensitive data to unauthorised parties.

Duplicate media

Duplicate CD's, DVD's and Blu Ray discs

Video to DVD or Blu Ray

Convert videos to standard video discs playable in DVD and Blu Ray players.

Forensic image copy

A forensic copy of the memorycard takes all data from the device, including hidden sectors and files that have been marked as deleted. The forensic image can be opened by standard forensic tools on a PC or natively in mac and unix environments.

Viewer software

Our royalty-free image viewer software can automatically be written to discs to ensure data can easily be viewed, displayed, and printed without the costs of purchasing an expensive software license.

Capture user input

The touch screen enables data to be quickly captured enabling extra meta data to be stored at the time of download. This can then be used for auditing and integration with other systems, streamlining workflow.

Touch Screen

7" Display
350 cd/m2 brightness
400:1 Contrast ratio

Multi- Format Drives

CD - CD-R 700MB
DVD - DVD-R 4.7GB
Blu Ray - 25Gb - 128GB BDXL

Pro Card Reader

CompactFlash™, CompactFlash™ UDMA, MicroDrive™, Secure Digital™, Secure Digital High Capacity SDHC, Secure Digital eXtreme Capacity SDXC, miniSD™, microSD™, Memory Stick™, Memory Stick Duo, Memory Stick Micro, xD-Picture Card™ Type H, M, M+

Book A Demo

Contact Westpoint to arrange a demonstration and see how the MediaStation can help you.
